

CLEANING AND CARE

of oiled wood floors

proffwoodcare.ch

OILED WOOD

Oiled wood flooring is on-trend. Its natural appearance and texture with matt-satin finish enhances any room and feels pleasant and warm underfoot. And the benefits don't stop there. Oiled surfaces also have practical advantages in terms of durability, resistance to dirt, breathability and ease of cleaning and care. For high quality living in your own home.

KEEP YOUR FLOOR LOOKING BEAUTIFUL

Care for it properly

Conventional floor cleaners and care products can damage wood. Avoid this by using original PROFF Woodcare products for your wood floor. To maintain your floor, we recommend regular re-oiling in line with the level of use. These simple steps will help you preserve the natural beauty of your wood floor for many years to come.

Avoid wood damage from microfibre cloths

Microfibre cloths are very popular for household cleaning but they are unsuitable for wood floors as they damage the finish.

Protect it from drying out

A minimum of 40 percent humidity is ideal for wood flooring. Especially in winter, however, heated rooms can often be drier than this. Humidifiers will help protect the floor from drying out.

Avoid scratches

We recommend using felt pads placed underneath your furniture. These help to prevent scratch marks appearing on the wood from moving chairs and other furniture.

CLEANING AND CARE

Oiled wood flooring is extremely hard wearing. You can remove superficial dirt easily by vacuuming and dry-mopping. You can then **mop** the floor using water and Wood Floor Soap or Oil Refresher from PROFF Woodcare. Wet-mopping using these specialist products will ensure optimum care.

FOR BEST RESULTS

MULTIMOPP

With cotton fringe and comfort-grip handle

BUCKET

red/blue with castors

WOOD FLOOR SOAP

For routine cleaning and care of wood floors.

OIL REFRESHER

For routine cleaning and care of wood floors.

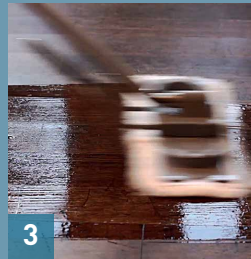

STEPS

1 Use a vacuum or cleaning cloths to clean the floor, removing dust and superficial dirt.

2 Mix the Wood Floor Soap or Oil Refresher from PROFF Woodcare with warm water. (100 ml concentrate to 4 litres of warm water).

3 Mop the floor using the cotton-fringed multimopp pad (avoiding puddles).

4 For best results, rinse the mop in clean, warm water after every wipe to avoid spreading the absorbed dirt over the floor.

5 After cleaning and re-oiling, leave the floor to dry. Do not mop with clean water.

CLEANING AND CARE WITH THE PULU SPRAYMOPP

Oiled wood flooring is extremely hard wearing. You can remove superficial dirt easily by vacuuming and dry-mopping. You can then **mop** the floor using water and Wood Floor Soap or Oil Refresher from PROFF Woodcare. Wet-mopping using these specialist products will ensure optimum care.

Tile mop for ceramic surfaces

WOOD FLOOR SOAP

For routine cleaning
and care of wood floors.

OIL REFRESHER

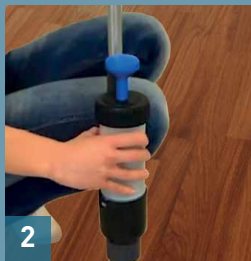

For routine cleaning
and care of wood floors.

STEPS

Use a vacuum or cleaning cloths to clean the floor, removing dust and superficial dirt.

Mix the Wood Floor Soap or Oil Refresher from PROFF Woodcare with warm water (use 1 cap of concentrate for each full bottle).

Press SoftTouch button to activate the Pulu Spraymopp spray.

Mop in direction of spray head.

After cleaning and re-oiling, leave the floor to dry. Do not mop with clean water.

CLEANING AND CARE FREQUENCY

Use the guide below to check how often you should clean and oil your wood floor at a glance. This will retain the original beauty and positive features of your floor for many years to come.

Note: this schedule is only intended as a guide.

Actual cleaning requirements may vary depending on the environment.

	CLEANING AND CARE
FLOORS IN LOW-TRAFFIC AREAS Bedrooms	Every 6 weeks
FLOORS IN MEDIUM-TRAFFIC AREAS Hallways, office, living room	Every 4 weeks
FLOORS IN HIGH-TRAFFIC AREAS Kitchen, entrance, public building	Every 2 weeks

Oil-soaked cloths carry a fire risk. As a precaution, cloths should be rinsed in water after use and sealed in an airtight container.

TESTED AND CERTIFIED

To ensure PROFF Woodcare products always meet the highest environmental standards, they undergo regular intensive testing. They are also certified by the following nationally and internationally accredited bodies.

EN 71-3

The migration of metals (As, Hg, Se, Cr, Sb, Cd, Pb, Ba) from the sample was tested to EN 71 Part 3 1995. No migration of the specified metals above the detection limit (10-50 ppm) was detected. All products for the home are therefore suitable for children's toys.

DIN 53 160

Testing was carried out in accordance with method B 82.10 from the official collection of test procedures according to Section 35 of the Foods and Other Commodities Act (adoption of German standard DIN 53 160). According to the results of the tests, the test strips applied to the various wood coatings showed no discernible colouring. The wood coatings are therefore resistant to saliva and sweat.

MINERGIE-ECO® Minergie-Eco®

Products with this ecolabel meet the Minergie-Eco® requirements for good environmental, living and working quality. The criteria cover pollutant-free indoor spaces, for example, as well as low environmental impact and the conservation of resources from manufacture to disposal.

VOC-free

Some solids or liquids emit volatile organic compounds (VOCs) that can cause symptoms such as headaches in extreme cases. VOC-free products have been proven to be exempt from such substances.
